

## Follow Focus/Iris Foxi by bebob

---

Foxi by bebob is a professional remote device for control of Focus and Iris. It is designed for use only with **Panasonic DVX100B** and **HVX200** cameras.

The following functions can be controlled:

- Focus (rotating knob)
- Switching between Auto-Focus and Manual-Focus
- Iris (slider paddle)
- Switching between Auto-Iris and Manual-Iris

The Focus knob is designed in similar style to a Follow-Focus knob with a diameter of 60mm with an approximate 270 degrees of rotational travel. A built in non adjustable fluid friction allows slow, accurate and repeatable Focus control movements.

The control of the iris is made using a throttle design sliding paddle indicator.

Two sliding-switches located at the bottom of the Foxi housing allows toggling from Auto to Manual-Focus and from Auto- to Manual-Iris and vice versa.

Both focus and Iris offers markable scales.  
NOTE: Do not use permanent markers.

The Foxi can be mounted to a tripod pan arm for studio configuration or on 15mm light weight mattebox rods for cinema configuration (using the supplied spacer bracket).

In extent of supply for the quick-release clamp a spacer is enclosed. This allows enough place between Foxi and camera case to be engaged comfortably appropriately at the camera control elements (particularly AWB).

Foxi by bebob is designed to be used also together with the Zoe-dvx zoom remote.

Foxi is designed for use only with:

- Panasonic AG-DVX100B
- Panasonic HVX200

Order Number (Parts group 730-0150)

FOXI-DVX-HD	Focus remote for AG-DVX100 + AG-HVX200
